

Zoom Tips for iPhone & iPad

Setting Up Zoom:

- **Settings → Accessibility → Zoom → Enable**
- **Upon the first time turning on, change the magnification region to “full screen”**
- **It will immediately zoom in. To zoom out, use three fingers and double tap on the screen.**

1 FINGER – Scroll & Select

- **Scroll downwards on a page by flicking up. Scroll upwards by flicking down.**
- **Think of scrolling as turning the page of a book for more information. When you run out of content or need to open something new, you must use 1 finger to scroll and/or select.**
- **Selecting an item is the same. Simply tap the designated area on screen with your finger once.**

3 FINGERS – Panning & Turning ON/OFF Zoom

- **Double tap with 3 fingers to turn zoom on and off.**
- **To change the zoom intensity, double tap with 3 fingers, but on the second tap, drag your fingers forwards or backwards without lifting to magnify and de-magnify the zoom feature.**
- **Drag 3 fingers to pan around screen. Think of this as moving the magnifier around a sheet of paper. This is different from scrolling with 1 finger. Think of scrolling as turning the page for more information.**

Zoom Controller

Found under Settings > Accessibility > Zoom > Zoom Controller.

Once you enable Show Controller:

- **Change the color to whatever pops most, which is usually red**
- **Change the opacity from 50% to 100%.**
- **Change the Zoom Controller Actions**
 - **Set Single Tap to Speak on Touch**
 - **Set Double Tap to Zoom In/Out.**
 - **Triple Tap can be Show Menu or None.**

Single Tap on Controller: When you tap once on the controller, the next item you tap on will be read aloud.

Double Tap on Controller: A double tap of the controller will zoom in and out.

Hold Finger on Controller: Magnify the screen and maneuver around by holding your finger on the controller and moving toward what you'd want to see.
