

REQUESTING A RIDE ON ANDROID

Google Assistant and Android TalkBack can be utilized together to request a ride through the Uber or Lyft apps.

- **Wake your google assistant and say, “Get me an Uber/Lyft to [ADDRESS or LOCATION].” If you have your home address saved within the app, you can simply say, “Get me an Uber to home.”**
- **The Uber/Lyft app will open and automatically insert your current location for pickup as well as your desired address or location as it was spoken.**
- **Next, choose your ride type. To do so, move your way down the screen by flicking 1 finger to the right to. You will have various options to choose between that cost varying prices.**
- **If you do not choose an option, you will automatically have a regular Uber or Lyft ride called, meaning you can fit 3 people or less.**
- **To finish calling your ride, you continue to flick with 1 finger to the right until you come across the Choose Uber or Select Lyft button at the bottom of the screen. Once you come across the button, double tap with one finger to select and call your ride.**
- **When your driver has arrived, you will receive a notification that will be read aloud.**
