

Acesight

The new line of Zoomax wearable augmented reality (AR) glasses, Acesight, is designed for visually impaired people seeking greater independence, and it's coming soon! Acesight opens up a whole new world for people with vision loss. Featuring a lightweight headset, with Acesight, seeing is as easy as looking.

Acesight electronic glasses employ Augmented Reality technology and features two full HD displays that float in front of each eye. A tracking auto focus camera between the eyes captures everything the user looks at and presents everything in magnified form up to 15x normal size. A hand-held controller allows the user to adjust magnification, colors & contrast.

Acesight is ideally suited to individuals with a visual acuity range from 20/100 to 20/800, and who may have eye conditions such as macular degeneration, glaucoma, and diabetic retinopathy.

Acesight can assist with every day activities such as watching television, viewing faces and objects, reading/writing, or playing cards. Thanks to its quick refresh rate, even walking around is something that can be achieved with Acesight.
