

weWALK

The weWALK smart cane is a white cane that uses technology that aims to help visually-impaired people navigate their surroundings. The WeWALK cane consists of an electronic handle with a regular 'analog' white cane that is inserted into the bottom. It also uses an ultrasonic sensor built into the handle to detect any obstacles above chest level and warns the user via a vibrating handle.

Users can pair the cane with their smartphone with the ability to integrate it with a voice assistant and google maps, giving you step by step directions to your destination.

Search for Nearby Places and Explore the Area

weWALK helps you to find popular places, restaurants, pubs and cafes around you. All you need to do is to choose where to go and get navigation over your WeWALK application.

It uses its built-in speakers to inform the user of nearby stores and infrastructural details that they may not be able to see.

The weWALK smart cane runs on android and iOS-based mobile phones. It features a USB input that can be used to charge the battery with one full charge lasting up to five hours of usage time.
