

eSight[®]

BY GENTEX CORPORATION

eSight Go[™]

The most advanced vision enhancement solution

Our innovative wearable assistive device or electronic glasses can help people with significant central vision loss and legal blindness achieve up to 20/20 enhanced vision. eSight Go[™] glasses are lightweight, sleek, and comfortable, seamlessly moving with you from indoor, routine activities to outdoor, physical environments. A small, high-speed, high-definition camera captures everything you are looking at. Our advanced, clinically validated algorithms optimize and enhance the footage. It is then presented on two OLED monitors, one in front of each eye, in real time. Your brain synthesizes the images, and you see with clarity what is in front of you.

Thoughtfully crafted to move seamlessly through the day, from reading to activities indoors and out

- **Wireless and hands-free device with built-in controls.**
- **Incorporates natural peripheral vision for 100% mobility retention.**
- **The lightweight design allows for the glasses to be worn throughout your day.**
- **Innovative easy-swap rechargeable batteries: each with up to 3 hours of continuous use.**

Features
